Cannabis General Growing Info

The 4 growth stages of the cannabis plant

STAGE 1 Seedling

The temperature for clones and seedlings should be around 25°C (77°F).

The humidity level should be around 80-90%

STAGE 2Vegetative

During the vegetative stage, the temperature should be around 20-25°C (68-77°F). Day time: 25°C Night time: 20°C

The humidity level should be around 70-75%.

STAGE 3 Flowering

During the flowering stage, the temperature should be around 23-27°C (73-81°F). Day time: 27°C Night time: 23°C

The humidity level should be around 50-60%.

STAGE 3 Final Weeks

At the end of the flowering cycle, the temperature still needs to be around 23-27°C (73-81°F).

Day time: 27°C Night time: 23°C

The humidity level should be around 40-45%.

The rule of thumb for harvest is 70%/30% milky/amber trichomes. You can check them with a microscope!

Flush your plants with only water for the last 10-14 days.

AT ALL STAGES YOUR PLANTS SHOULD

- Have a good ventilation and airflow,
- A minimum 400 watt HPS Lights per m² or 300W LED,
- A PH level of 5.6 6,
- A 'Goldilocks' medium, not too wet/not too dry!
- Be checked for pests, diseases and deficiencies.
- Check out our infographic about issues from fertilizer deficiency or excess.
